🔒 **ACTIVE TS/SCI CLEARANCE** | 🌟 **COMPTIA SECURITY+ / DoD IAT LEVEL II**

## Professional Summary

Cleared cybersecurity and mission analysis professional supporting U.S. Department of Defense and Space Force mission systems. Experience spans Mission Relevant Terrain–Cyber (MRT-C), MILSATCOM sustainment cyber T&E, RMF and DISA compliance, mission dependency analysis, and cyber risk assessment. Skilled in translating complex technical requirements, vulnerabilities, and test evidence into concise documentation and actionable information for engineers, program stakeholders, mission owners, and operational leadership.

## Professional Experience

### Pacific Technologies & Solutions — Department of Defense Contractor

**Aug 2026 – Present**

*MRT-C Mission Analyst*

*Colorado Springs, CO*

- Conduct Mission Relevant Terrain–Cyber (MRT-C) analysis supporting U.S. Space Force missions by mapping mission threads, systems, network dependencies, and cyber terrain critical to mission execution.
- Analyze mission dependencies, system vulnerabilities, cybersecurity deficiencies, and defensive capabilities to support identification of Mission Relevant Terrain and Key Terrain–Cyber and inform mission-focused cyber risk decisions.
- Develop and communicate technical findings supporting Operational Risk Assessments (ORAs), Asset Defense Plans (ADPs), and mission data products, translating system-level cyber information into actionable context for mission owners, cybersecurity personnel, program offices, and defensive cyber stakeholders.

### nLogic — Department of Defense Contractor, Space Systems Command

**Jan 2024 – Oct 2025**

*Sustainment Cyber Test Engineer — MILSATCOM*

*Colorado Springs, CO*

- Planned and executed sustainment cybersecurity T&E for MILSATCOM systems, evaluating security controls, DISA STIG requirements, system configurations, and technical evidence in support of RMF and Space Force cybersecurity objectives.
- Authored DTPs, SOPs, test reports, and compliance documentation translating cybersecurity requirements and test results into traceable technical evidence; communicated findings and cyber risk to engineers, program leadership, and government stakeholders.
- Automated compliance data collection and reporting using PowerShell and DISA tooling, improving repeatability and traceability of cybersecurity test results while reducing manual analysis.

### Orchard Alliance

**May 2023 – Jan 2024**

*Systems Migration Intern*

*Colorado Springs, CO*

- Supported migration of legacy financial systems to cloud infrastructure using SQL and Python, performing data mapping and coordinating technical activities across development and business teams.
- Authored technical documentation, process flows, user stories, and UAT procedures to translate business requirements into testable system requirements and support verification and traceability.

## Education

### University of Colorado Colorado Springs (UCCS)

**Dec 2023**

**B.S. Computer Science, *Cum Laude*** — Colorado Space Grant Consortium Scholar — 8× Dean's List

## Selected Projects

### Battle of Brawn Competition Operations Hub — React / TypeScript

**2025 – Present**

*Developer — Springs Climbing Center*

**Live GitHub Pages Deployment**

- Developed and deployed a React/TypeScript operations hub supporting a 300+ competitor climbing event, centralizing finals timing and projection, scoring workflows, raffles, drawer reconciliation, and staff SOPs.
- Integrated browser-based tools with PowerShell, Python, and Google Forms/Sheets workflows to reduce manual event operations; migrated the application to GitHub Pages for version-controlled deployment and long-term maintainability.

### NASA Wearables — A.R.E.S. (Anatomical Recreation through Embedded Systems)

**2022**

*Group Lead — Colorado Space Grant Consortium Undergraduate Space Research*

**Project & Research Paper**

- Led a three-person research team evaluating multi-IMU wearable sensing for spacesuit applications, developing an Arduino-based prototype to capture acceleration and angular velocity for analysis of astronaut motion and off-planet loading conditions.
- Integrated multiple IMU sensors, I2C/SPI communications, onboard microSD data logging, and MATLAB-based kinematic modeling; co-authored and presented findings at the 2022 COSGC Undergraduate Space Research Symposium, earning **Best Design**.

## Technical Skills

**Cyber & Mission Analysis:** Cyber Risk Analysis, RMF, DISA STIGs, ACAS, SCAP, Vulnerability Assessment

**Programming & Systems:** PowerShell, Python, Java, C#, SQL, Linux, Windows, Git, Scripting & Automation

**Technical Communication:** Technical Writing, ORAs, ADPs, DTPs, SOPs, CDRLs, Requirements Traceability

## Interests & Activities

UCCS Climbing Team Founder — USAC L1 Routesetter & L2 Coach — 2024 Collegiate INT National Champion
